RAM

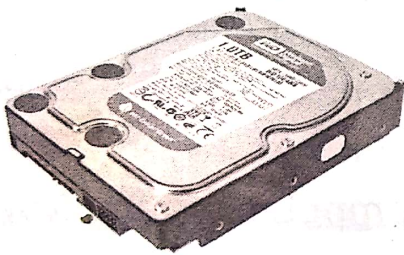

ROM

RAM (Random Access Memory) : It is used for holding the data temporarily while the computer is working. Its data gets erased when the computer is switched off.

ROM (Read Only Memory) : It holds the instructions given by the manufacturer to operate the computer. It is a permanent memory.

hard disk

It stores all the software and data. It is fixed inside the CPU box.

compact disk

It is a portable device that stores large amount of data.

pen drive

It is a small portable device that stores very large amount of data.
